Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1	Stage 2	Stage 3
Actions <i>What does the customer do?</i>	- Receives the event invite and reads the event topic/description - Feels the need to prepare a few relevant talking points in advance	- Opens the Streamlit app and enters bio, event description and interests - Clicks "Generate Starters" and reviews the suggested prompts - Requests a quick fact-check on an unfamiliar topic before the event	- Uses the generated starters to open conversations at the event - Returns to the app afterwards and opens the History view - Marks starters as useful or not useful (thumbs up/down)
Touchpoint <i>What part of the service do they interact with?</i>	- Calendar/email invite - Event website or agenda page	- Streamlit input area (bio & event description) - Generation Engine Control (Generate Starters) - Fact Verification Module (Wikipedia lookup)	- Output Display & Chat panel - History and Feedback section of the app
Customer Thought <i>What is the customer thinking?</i>	"What should I even talk about with strangers?" "I hope I don't come across unprepared"	"These starters actually fit the event topic" "Good, I can verify this fact before I say it out loud"	"That opener worked really well" "I should reuse this approach at the next event"
Customer Feeling <i>What is the customer feeling?</i>	- Slightly anxious - Uncertain about what to say	- Reassured - Increasingly confident	- Satisfied - More confident about networking overall
Process Ownership <i>Who is in the lead on this?</i>	User / Event organiser	- Streamlit frontend team - FastAPI orchestration & AI/NLP service team	- User - Data & Storage layer (interaction logs)

Phase of Journey	Stage 1	Stage 2	Stage 3
Opportunities <i>How can we improve this stage?</i>	Auto-import event details from the calendar invite	- Reduce GPT-2 response latency - Add multi-language starter support	Add an analytics view of the most successful starter categories
