Solution Architecture Diagram:

Provide a high-level visual representation of your solution's architecture. Use the structural layout below as a template to map out your Presentation Layer, Application Layer, and Data Layer. Fill in the specific technologies and components for your project directly into the boxes to create your architectural diagram.

Component Description Table

Component Name	Description / Role in Architecture	Technologies Used
Presentation Layer	Provides the interface for entering bio/event description, triggering starter generation and fact-check requests, and viewing generated starters and history.	Streamlit

Component Name	Description / Role in Architecture	Technologies Used
API Gateway	Exposes REST endpoints and orchestrates requests between the frontend, AI/NLP service, and fact verification module.	FastAPI, Uvicorn
Microservices	Extracts event themes (DistilBERT), generates conversation starters (GPT-2), and verifies facts via Wikipedia lookup.	Hugging Face Transformers (DistilBERT, GPT-2), Wikipedia API wrapper
Database	Persists user profile/bio data and logs conversation history and feedback for auditing and personalization.	Local JSON files (history.json, feedback.json), SQLite/PostgreSQL-ready
