Project Executable Files

This section requires submission of all executable and deployable files for the Personalized Networking Assistant. All files are organized, named, and uploaded to the specified submission platform so that the evaluator can run or deploy the solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes/No/NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	NA (run locally)
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	No
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Overview of the project's file and folder structure:

```

/personalized-networking-assistant
/app
  /routes          - FastAPI route definitions
  /services
    event_analyzer.py    - DistilBERT theme extraction
    topic_generator.py   - GPT-2 conversation generation
    fact_checker.py      - Wikipedia API fact verification
    history_logger.py    - Conversation history persistence
    feedback_logger.py   - User feedback persistence
  main.py            - FastAPI application entry point
/frontend
  app.py             - Streamlit user interface
/data
  history.json        - Stored conversation history
  feedback.json       - Stored user feedback
/tests
.env.example         - Sample environment configuration
requirements.txt     - Python dependencies
README.md            - Setup and run instructions

```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not hosted; the application is run locally for demonstration and evaluation
Login Credentials (Demo)	Not applicable - no authentication is required in the current scope
Platform / Hosting Provider	Local (Uvicorn for FastAPI, Streamlit local server)
Repository Link	[Paste your GitHub / GitLab repository link here]
Demo Video Link	[Paste your demo video link here]

Step 4: Run Instructions

Step-by-step instructions for the evaluator to run the project locally:

```

Pre-requisites: Python 3.10+, pip, Git

Step 1: Clone the repository
git clone <repository-url>

Step 2: Create and activate a virtual environment
python -m venv venv
venv\Scripts\activate (Windows) | source venv/bin/activate (macOS/Linux)

Step 3: Install dependencies
pip install -r requirements.txt

Step 4: Configure environment
copy .env.example to .env and add any required API keys

Step 5: Start the FastAPI backend
uvicorn app.main:app --reload

Step 6: Start the Streamlit frontend (in a separate terminal)
streamlit run frontend/app.py

Step 7: Access the application
Streamlit UI: http://localhost:8501
FastAPI Swagger docs: http://localhost:8000/docs

```

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	GPT-2 generation latency increases under concurrent requests	Model pipelines are loaded once at startup to reduce per-request overhead
2	Wikipedia API occasionally times out for uncommon topics	Request wrapped in a try/except block with a graceful fallback message
3	No user authentication in the current scope	Identified as a planned future enhancement
