

Demonstration of Proposed Features

Date	15 March 2026
Team ID	SB25-PNA-1042
Project Name	Personalized Networking Assistant
Maximum Marks	1 Mark

Demonstration of Proposed Features:

This document captures all the features that were proposed during the planning phase of the Personalized Networking Assistant and tracks whether each feature was successfully implemented and demonstrated. It serves as evidence of the team's ability to deliver on the proposed solution.

S.No	Feature Name	Description	Status	Demonstrated	Remarks
1	Event Theme Extraction	Uses DistilBERT (zero-shot classification) to extract key themes such as AI, sustainability, or healthcare from a user-entered event description.	Implemented	Yes	Accurately identified 2-3 relevant themes across test event descriptions.
2	Smart Conversation Starter Generation	Uses GPT-2 (text-generation pipeline) to generate 2-3 context-aware conversation starters based on extracted themes and user interests.	Implemented	Yes	Generated coherent, relevant prompts within acceptable response time.
3	Fact Verification via Wikipedia API	Allows users to search a topic (e.g., 'blockchain in healthcare') and returns a concise, reliable summary sourced from Wikipedia.	Implemented	Yes	Returned accurate summaries for common networking-event topics.
4	Conversation History Logging	Logs every generated conversation starter along with the event context into history.json for later retrieval via the History feature.	Implemented	Yes	History entries persisted correctly across sessions.
5	User Feedback Mechanism	Allows users to mark generated starters as useful (thumbs up) or not, storing responses in feedback.json to guide future personalization.	Implemented	Yes	Feedback captured and displayed correctly in the History panel.
6	Interactive Streamlit Frontend	Provides an input section for event description and interests, generation buttons, and real-time display of history and feedback.	Implemented	Yes	UI validated for responsiveness across local browser sessions.

Feature Implementation Summary:

Total Features Proposed	6
Total Features Implemented	6
Total Features Demonstrated	6

Overall Implementation Rate (%)	100%
